

### 1) Technical Report:

- Introduce the overall problem and report we are doing from the sow document. Introduce the framework behind it.
- Give data frames/images for what we are answering.
- Explain the data processing we did such as cleaning.
- Draw a conclusion (do this later)
- Provide additional context.

### 2) Non-technical report:

- Address what visuals and data collection we are doing in the analysis. Answering key questions we are doing. Introduce the framework.
- Show images for the result such as line charts or data frames. (done in a separate file).
- Interpret the image and analyse it.
- Draw key conclusions and findings based on overall. (do this last).
- Provide additional context and/or explanation for the data.

This is not the final outline as I need everyone to agree to the outline of the reports.

Each person has their own section to do such as the data processing and cleaning.

The conclusion will be reached until everyone agrees with the overall.
